

INDUSTRY SOLUTIONS

Pulp & Paper and Wood Products

Plant Prosperity Through Enhanced Productivity

Global competition, plant consolidations, environmental compliance issues, customer demands, and the rising cost of raw materials and energy are just some of the challenges confronting the pulp & paper and wood industry today. Profitability is jeopardized by high capital intensity and low return on investments — which makes efficient use of resources and the implementation of innovative technology all the more critical.

To improve your company's bottom line, InSource Solutions can offer the best mix of products and services to enable you to streamline your manufacturing and maximize resources. You're looking for solutions that can bring wood and paper products to market — faster and cheaper. We can help.

Our experience with manufacturing and automation processes and industry-specific knowledge will guide you to the best technology that will help your business achieve short-term gains, and long-term benefits. A partnership with InSource will help your business:

- Streamline the manufacturing processes
- Collect and analyze key data vital to management decision-making for maximum plant efficiency
- Gain more control over manufacturing operations

Streamline Manufacturing Processes

We understand that turning a profit and sustaining superior performance requires the ability to monitor operations — and ensure that production is operating at maximum efficiency and minimum downtime. Cost efficiency and product quality depend on the careful monitoring and optimal use of costly raw materials such as fibers, chemicals, and energy sources.

Collect and Analyze Data

InSource's solutions will enable you to automatically collect and feed data into your plant intelligence system, analyze that data, while monitoring energy and materials uses. Through close scrutiny of the manufacturing process, you can determine where the problems occur and rapidly make the necessary adjustments to minimize downtime and increase profitability.

Gain Control of Manufacturing Operations

InSource Solutions helps manufacturing businesses like yours answer the following questions so critical to improved productivity:

- What software tools assist you in shortening cycle times and reducing costs?
- What hardware will secure and maximize my investments — and support my implementations?
- What solutions will allow me to see the “big picture” by aggregating data across my business's manufacturing, quality and compliance processes?
- How can my quality control program be implemented or improved, while proactively managing risk?
- How can my company meet local regulatory reporting requirements?

InSource Solutions — Plant Intelligence Solutions

We're committed to finding the right answers and the right solutions. InSource offers computer hardware, enclosures, and industrial networking products as well as software solutions that can operate continuously in a harsh manufacturing environment, like the pulp mill, starch kitchen or high speed lumber converting line.

At InSource Solutions, we'll help guide your decision-making while empowering you with a low-risk strategy that accommodates growth of your operations and intelligence systems.
